

<b>1</b>	<b>Introduction to Some Programming Styles</b>	<b>1</b>
<b>1.1</b>	<b>Functional Programming</b>	<b>1</b>
1.1.1	Easier Programming . . . . .	2
1.1.2	Underlying Formalisms . . . . .	3
1.1.3	Functions as Values . . . . .	4
1.1.4	Constraints of Functional Programming . . . . .	5
<b>1.2</b>	<b>Generic Programming</b>	<b>7</b>
1.2.1	Combining Type Flexibility and Type Precision . . . . .	8
1.2.2	Combining Components Variability and Link Precision . . . . .	10
<b>1.3</b>	<b>Object Programming</b>	<b>12</b>
1.3.1	Effective Modeling . . . . .	13
1.3.2	Compatible Object Types . . . . .	13
1.3.3	Objects as Values . . . . .	14
<b>1.4</b>	<b>Mixing Up Styles Together</b>	<b>14</b>
<b>2</b>	<b>Quick Introduction to OCaml</b>	<b>15</b>
<b>2.1</b>	<b>The Interactive Environment</b>	<b>15</b>
2.1.1	Using the Interactive Environment . . . . .	15
2.1.2	Typing . . . . .	18
2.1.3	Exploiting the Standard Library . . . . .	19
<b>2.2</b>	<b>Type Reading</b>	<b>20</b>
2.2.1	Verifying Existing Definitions . . . . .	21
2.2.2	Reading Unary Function Types . . . . .	21
2.2.3	Reading n-ary Function Types . . . . .	22
2.2.4	Reading Parameterized Types . . . . .	25
<b>2.3</b>	<b>New Value Definitions</b>	<b>27</b>
<b>3</b>	<b>Elements of Functional Programming</b>	<b>31</b>
<b>3.1</b>	<b>Basics</b>	<b>31</b>
3.1.1	Terminology . . . . .	31
3.1.2	Variables and Bindings . . . . .	33
3.1.3	Global Binding Definitions . . . . .	33
3.1.4	Local Binding Definitions . . . . .	36
3.1.5	Life and Hiding . . . . .	37
3.1.6	Garbage-Collecting . . . . .	39
3.1.7	Function Definitions . . . . .	40
3.1.8	Recursive Function Definitions . . . . .	41
3.1.9	Local Environments within Functions . . . . .	42

3.1.10	Functional Values and Closures . . . . .	45
3.1.11	The let's: a Partitioning System . . . . .	47
<b>3.2</b>	<b>Evaluation Strategies</b>	<b>48</b>
3.2.1	Result Independance . . . . .	48
3.2.2	Value Evaluation . . . . .	49
3.2.3	Name and Lazy Evaluations . . . . .	51
3.2.4	Choosing an Evaluation Strategy . . . . .	54
3.2.5	Exceptions in Evaluation Strategies . . . . .	55
<b>4</b>	<b>Functions</b>	<b>57</b>
<b>4.1</b>	<b>Forms and Facets of Functions</b>	<b>57</b>
4.1.1	Functional Parameters and Code Transmission . . . . .	57
4.1.2	Functions in Data Structures and Code Organization . . . . .	59
4.1.3	Anonymous Functions . . . . .	60
4.1.4	Using Anonymous Functions . . . . .	61
4.1.5	N-ary and Curried Functions . . . . .	62
4.1.6	Using Curried Functions . . . . .	63
4.1.7	Tail Recursive Functions . . . . .	66
4.1.8	Infixation . . . . .	69
<b>4.2</b>	<b>Functional Genericity</b>	<b>71</b>
4.2.1	Polymorphisms . . . . .	71
4.2.2	Generic Functions . . . . .	72
4.2.3	Generic Functions in Other Languages . . . . .	75
4.2.4	Generic Predicates . . . . .	77
4.2.5	The Limits of the Functional Genericity . . . . .	78
<b>4.3</b>	<b>Function Typing</b>	<b>80</b>
4.3.1	Explicit Typing . . . . .	80
4.3.2	Type Abbreviations . . . . .	81
4.3.3	Using Explicit Typing . . . . .	82
4.3.4	The Type Inference and its Error Messages . . . . .	83
4.3.5	The Type Inference and the Search for Errors . . . . .	85
<b>5</b>	<b>Types</b>	<b>89</b>
<b>5.1</b>	<b>Type Zoology</b>	<b>89</b>
5.1.1	The Classical Hierarchy . . . . .	89
5.1.2	The Access Hierarchy . . . . .	91
5.1.3	Types with Functional or Imperative Nature . . . . .	93
<b>5.2</b>	<b>Record Types</b>	<b>94</b>
5.2.1	Defining Record Types . . . . .	94
5.2.2	Instantiating Record Types . . . . .	94
5.2.3	Accessing Fields . . . . .	95
5.2.4	Record Type Possibilities . . . . .	96

5.2.5	Data Types and Recursion with Record Types . . . . .	97
5.2.6	The Limits and Advantages of Record Types . . . . .	99
5.2.7	Type Redefinitions . . . . .	100
<b>5.3</b>	<b>Inductive Types</b>	<b>101</b>
5.3.1	Inductive Type Definitions . . . . .	101
5.3.2	Inductive Type Instanciations . . . . .	102
5.3.3	Inductive Type Possibilities . . . . .	103
5.3.4	The Inductivity of Inductive Types . . . . .	105
<b>5.4</b>	<b>Pattern Matching</b>	<b>106</b>
5.4.1	Patterns . . . . .	106
5.4.2	Pattern Matching at Work . . . . .	106
5.4.3	Filtering . . . . .	109
5.4.4	The Reasons of Using Filtering . . . . .	112
5.4.5	The Limits of Pattern Matching and Filtering . . . . .	114
<b>5.5</b>	<b>Some Applications of Inductive Types</b>	<b>117</b>
5.5.1	Unions of Distinct Types . . . . .	117
5.5.2	Clarifying Code . . . . .	118
5.5.3	Partial Functions . . . . .	118
5.5.4	Emulated Overloading . . . . .	119
5.5.5	Defensive Programming: Dense Typing Style . . . . .	121
5.5.6	Simple Inductive Types and Record Types . . . . .	123
5.5.7	Structured Expression Typing . . . . .	124
5.5.8	Grammar Representations . . . . .	125
<b>5.6</b>	<b>The General Problem of Type Extensibility</b>	<b>129</b>
5.6.1	Features and Criteria of Type Extensibility . . . . .	129
5.6.2	Record Type Extensibility . . . . .	130
5.6.3	Inductive Type Extensibility . . . . .	131
5.6.4	The Inductive Types and the Explicit Labeled Types . . . . .	133
5.6.5	Flexible Inductive Types: Polymorphic Variants . . . . .	135
<b>6</b>	<b>Functional Data Structures</b>	<b>141</b>
<b>6.1</b>	<b>Lists</b>	<b>142</b>
6.1.1	A Sequential Data Structure Representation . . . . .	142
6.1.2	Lists : A Predefined Structured Type . . . . .	144
6.1.3	Some Functions on Lists . . . . .	145
<b>6.2</b>	<b>Programming Techniques on Functional Structures. I.</b>	<b>148</b>
6.2.1	Iterators . . . . .	148
6.2.2	Empty Structures and Partial Functions . . . . .	149
6.2.3	Associative Tables and Structural Constraints . . . . .	151
<b>6.3</b>	<b>Trees</b>	<b>152</b>
6.3.1	Binary Trees . . . . .	152
6.3.2	Trees : an Example of Composed Data Structure . . . . .	157

6.3.3 Multiple Compositions . . . . .	160
<b>6.4 Persistence</b>	<b>160</b>
6.4.1 A Property of Functional Programming . . . . .	160
6.4.2 The Advantages of Persistence . . . . .	163
6.4.3 The Disadvantages of Persistence . . . . .	165
<b>6.5 Programming Techniques on Functional Structures. II.</b>	<b>166</b>
6.5.1 Taming the Disadvantages of Persistence . . . . .	166
6.5.2 Controlling Navigation within Data Structures . . . . .	170
6.5.3 Tail Recursivity on Lists . . . . .	173
6.5.4 Tail Recursivity on Trees . . . . .	174
<b>6.6 Functional Data Structures</b>	<b>176</b>
6.6.1 The Limits of Inductive Types . . . . .	176
6.6.2 Ambiguity and Inductive Types . . . . .	178
6.6.3 Homogeneous and Heterogeneous Data Structures . . . . .	183
6.6.4 Graphs and Non Functional Data Structures . . . . .	186
<b>7 Imperative Programming</b>	<b>193</b>
<b>7.1 Exceptions</b>	<b>194</b>
7.1.1 Partial Functions and Error Handling . . . . .	194
7.1.2 A Basic Type: the Exceptions . . . . .	197
7.1.3 Raising Exceptions . . . . .	197
7.1.4 Catching and Handling Exceptions . . . . .	199
7.1.5 Exceptions as an Optimisation Tool . . . . .	200
7.1.6 Exceptions as Values . . . . .	202
<b>7.2 Procedures and Unit</b>	<b>203</b>
7.2.1 Procedures Are Not Functions . . . . .	203
7.2.2 Sequences . . . . .	205
7.2.3 A Simple if-then Construction . . . . .	206
<b>7.3 Using Procedures</b>	<b>206</b>
7.3.1 Primitive Debugging Techniques . . . . .	206
7.3.2 Batch Evaluations . . . . .	207
7.3.3 Basic Graphics . . . . .	209
7.3.4 Assertions . . . . .	210
7.3.5 File Handling or OCaml as a Script Language . . . . .	211
<b>7.4 Arrays : A Predefined Type</b>	<b>214</b>
7.4.1 Direct Access and Value Assignment . . . . .	214
7.4.2 Obtaining New Arrays . . . . .	215
7.4.3 Internal Iterators on Arrays . . . . .	216
7.4.4 Loops . . . . .	216
7.4.5 Strings: An Imperative Type . . . . .	218
<b>7.5 Records with Mutable Fields</b>	<b>219</b>

<b>7.6 References</b>	<b>219</b>
7.6.1 Mutable Elements . . . . .	219
7.6.2 References: A Basic Type . . . . .	220
7.6.3 A Typing Problem: The Generic References . . . . .	222
7.6.4 Imperative Operations and Generic References . . . . .	223
7.6.5 Using Closures and Generic References . . . . .	224
7.6.6 Imperative Data Structures and Generic References . . . . .	224
7.6.7 Non-Generalization and Weak Type Variables . . . . .	226
7.6.8 Non-Generalization and Function Applications . . . . .	229
7.6.9 Imperative Data Structures and Weak Type Variables . . . . .	231
<b>7.7 Choosing to Use the Imperative Style</b>	<b>232</b>
7.7.1 Several Problems of the Imperative Style . . . . .	232
7.7.2 The Propagation of the Imperative Style . . . . .	235
7.7.3 Interfacing OCaml with C . . . . .	237
<b>8 Functional Programming Techniques</b>	<b>239</b>
<b>8.1 Incremental Programming</b>	<b>240</b>
8.1.1 An Example: Analyzing Symbol Sequences . . . . .	241
8.1.2 A First Prototype . . . . .	242
8.1.3 More Elaborated Tests . . . . .	245
8.1.4 A Graphical Representation . . . . .	248
8.1.5 The Advantages of Incremental Programming . . . . .	249
<b>8.2 Generalizations</b>	<b>251</b>
8.2.1 The Idea of Generalization . . . . .	251
8.2.2 Transformation Generalizations: Foldings . . . . .	252
8.2.3 Summing up Generalizations . . . . .	257
8.2.4 Algorithm Generalizations . . . . .	258
8.2.5 Type Generalizations . . . . .	263
8.2.6 Polytypism . . . . .	265
8.2.7 Generalizations and Reuse . . . . .	267
<b>8.3 Data-Driven Programming</b>	<b>272</b>
8.3.1 A Generalized Generalization . . . . .	272
8.3.2 A Global Programming Technique . . . . .	275
8.3.3 Imperative Data-Driven Programming . . . . .	276
8.3.4 Type Extensibility and Data-Driven Programming . . . . .	278
<b>8.4 Functional Data Representations</b>	<b>279</b>
8.4.1 Sets as Functions . . . . .	280
8.4.2 Sub-Spaces as Functions . . . . .	283
8.4.3 Graphic Objects as Functions . . . . .	285
8.4.4 Real Numbers as Functions . . . . .	288
<b>8.5 Evaluation Control</b>	<b>289</b>
8.5.1 Basics of Evaluation Control . . . . .	290

8.5.2	Functional Freezing: A New Use of <code>unit</code>	290
8.5.3	Freezing and Lazyness	292
8.5.4	The Behavior of Functional Freezing	295
8.5.5	Data Structures with a Lazy Behavior	297
8.5.6	Freezing Evaluation Flow and Tail Recursivity	298
<b>8.6</b>	<b>Lazy Lists or Streams</b>	<b>301</b>
8.6.1	Freezing a Sequential Data Structure	301
8.6.2	Accessing the Elements of a Stream	303
8.6.3	Variations about Stream Definitions	304
8.6.4	Recursivity and Frozen Infinity	305
8.6.5	Iterators and Stream Compositions	307
8.6.6	Using Frozen Infinity	309
8.6.7	Streams and Lazyness Boundary	311
8.6.8	Generating Values by Streams	313
8.6.9	External Iterators as Streams	314
8.6.10	Infinite Sets as Streams	316
8.6.11	Streams: A Global Programming Technique	318
<b>8.7</b>	<b>Lazy Trees</b>	<b>319</b>
8.7.1	Freezing a Tree-like Structure	319
8.7.2	Using Lazy Trees	323
8.7.3	Choosing Explicit Lazyness	327
<b>8.8</b>	<b>Continuation Passing Programming</b>	<b>328</b>
8.8.1	Continuations	328
8.8.2	Continuations Passing and Partial Functions	329
8.8.3	Continuations Passing and Evaluation Control	331
8.8.4	Red-Black Trees	333
8.8.5	2-3 Trees	335
<b>9</b>	<b>Modular Programming</b>	<b>341</b>
<b>9.1</b>	<b>Modules as a General Encapsulating Mean</b>	<b>342</b>
9.1.1	Module Definitions	342
9.1.2	Accessing the Elements of a Module	343
9.1.3	Data Structures in a Modular Form	344
9.1.4	Remarks about Module Definitions	346
9.1.5	Local Modules	348
<b>9.2</b>	<b>Signatures: Types for Modules</b>	<b>349</b>
9.2.1	Inferred Signatures	349
9.2.2	Signatures Definitions	350
9.2.3	Abstract Data Types	351
9.2.4	Implemented Elements in Signatures	352
9.2.5	Signatures to Type Modules	353
9.2.6	Modules are Instances of Signatures	356

<b>9.3 Signatures Writing Techniques</b>	<b>358</b>
9.3.1 Signatures as Specification and Interface Means . . . . .	358
9.3.2 The Limits of Signature Specifications . . . . .	358
9.3.3 Overcoming the Limits of Signature Specifications . . . . .	359
9.3.4 Signature Generalizations . . . . .	360
9.3.5 Signatures for Functional and Imperative Styles . . . . .	361
<b>9.4 Public and Private Elements of Modules</b>	<b>362</b>
9.4.1 Public Elements . . . . .	362
9.4.2 Private Elements . . . . .	363
9.4.3 Signature Compatibility . . . . .	364
9.4.4 Public Exceptions . . . . .	365
9.4.5 Public Types . . . . .	366
9.4.6 Private Types and Abstract Data Types . . . . .	367
<b>9.5 Abstract Data Types</b>	<b>369</b>
9.5.1 The Reasons of Information Hiding and Substitutivity . . . . .	369
9.5.2 To Adapt Data Types . . . . .	370
9.5.3 To Optimize Data Types by Memoization . . . . .	372
9.5.4 Information Hiding and Generic Predefined Predicates . . . . .	375
9.5.5 Information Hiding and Optimization by Imperative Features . . . . .	376
9.5.6 "Public" Abstract Types . . . . .	379
9.5.7 "Public" Abstract Types and Type Constraints . . . . .	382
9.5.8 Conceptual Signature Generalizations . . . . .	384
9.5.9 Naming Tactics for Abstract Data Types . . . . .	386
9.5.10 Universal Type Parameters and Abstract Types . . . . .	388
<b>9.6 Module Linking by Inclusions</b>	<b>392</b>
9.6.1 Module and Signature Inclusions . . . . .	392
9.6.2 Inclusions and Inheritance . . . . .	393
9.6.3 Inclusions and Adaptations . . . . .	395
<b>9.7 Module Linking by Sub-Components</b>	<b>396</b>
9.7.1 Sub-Modules . . . . .	396
9.7.2 Module Openings . . . . .	397
9.7.3 Abstract Sub-Modules . . . . .	399
9.7.4 Signature Linking by Abstract Sub-Modules . . . . .	399
9.7.5 Abstract Sub-Modules and Constraints Inclusions . . . . .	401
9.7.6 Hiding Types of Sub-Modules . . . . .	402
9.7.7 Flattening Modular Levels . . . . .	404
9.7.8 Modular Aggregates of Data Types . . . . .	404
9.7.9 Modular Associations of Data Types . . . . .	406
9.7.10 A More Complete Example: The "Apple Men" . . . . .	409
<b>9.8 Information Hiding in Question</b>	<b>411</b>
9.8.1 Choosing to Hide . . . . .	411
9.8.2 The "Record-Modules" . . . . .	413
9.8.3 The <i>a posteriori</i> Information Hiding . . . . .	415
9.8.4 Information Hiding and Module Associations . . . . .	416

9.8.5	The Limits of Type Constraints . . . . .	417
9.8.6	The Extensibility of Value Representations . . . . .	418
<b>9.9</b>	<b>Modules as External Files and Batch Compilation</b>	<b>420</b>
9.9.1	Loading Modules in the Interaction Loop . . . . .	420
9.9.2	Module Batch Compilation . . . . .	422
9.9.3	Compiled Modules and the Interaction Loop . . . . .	424
9.9.4	Compiled Modules and Side-Effects . . . . .	425
9.9.5	Super-Modules as Packages . . . . .	426
<b>10</b>	<b>Generic Modular Programming: Functors</b>	<b>431</b>
<b>10.1</b>	<b>Functors</b>	<b>432</b>
10.1.1	The Idea of Module Functions . . . . .	432
10.1.2	Functor Definitions . . . . .	433
10.1.3	Using Functor Parameters . . . . .	434
10.1.4	Applying Functors . . . . .	435
10.1.5	Explicit Typing and Functors . . . . .	436
10.1.6	Sharing Types and Type Transmission . . . . .	437
10.1.7	Non-Modular Parameters . . . . .	438
10.1.8	Functors : a Typed Generic Modular Programming . . . . .	439
<b>10.2</b>	<b>Functor Programming Techniques and Basic Design Patterns</b>	<b>440</b>
10.2.1	Generic Modular Inheritance . . . . .	440
10.2.2	Generic Modular Adaptations . . . . .	442
10.2.3	Generic Modular Decorations . . . . .	443
10.2.4	Generic Modular Composites . . . . .	445
10.2.5	Generic Data Types . . . . .	447
<b>10.3</b>	<b>Functors and the Genericity Power</b>	<b>448</b>
10.3.1	Signatures and Universal Type Parameters . . . . .	448
10.3.2	Signatures and Abstract Types . . . . .	449
10.3.3	Going from one Genericity to Another? . . . . .	451
<b>10.4</b>	<b>Functors and Batch Compilation</b>	<b>453</b>
<b>10.5</b>	<b>n-ary Functors</b>	<b>456</b>
10.5.1	n-ary Functors Definitions . . . . .	456
10.5.2	Applying n-ary Functors . . . . .	457
10.5.3	A More Complete Example: Generic Graphs . . . . .	461
10.5.4	Type Constraints over Functors Parameters . . . . .	463
10.5.5	Sharing Types between Functors Parameters . . . . .	467
10.5.6	A Problem: Sharing Types vs. Information Hiding . . . . .	469
10.5.7	The "Data Type Nursery" Technique . . . . .	470
<b>10.6</b>	<b>Functor Signatures</b>	<b>472</b>
10.6.1	Types for Functors . . . . .	472
10.6.2	Specification and Functor Signatures . . . . .	475

<b>10.7</b>	<b>Functors of Functors: Higher-Order Functors</b>	<b>476</b>
10.7.1	A First Example of Higher-Order Functors . . . . .	476
10.7.2	Type Constraints over Functor Parameters . . . . .	477
10.7.3	Tuning Genericity by Higher-Order Functors . . . . .	477
10.7.4	Remarks about Functor Generalizations . . . . .	480
10.7.5	Modules and Functors Are Almost First Class Citizen . . . . .	481
<b>10.8</b>	<b>Choosing Generic Modular Programming</b>	<b>482</b>
10.8.1	Functors: Another Functional Programming . . . . .	483
10.8.2	Functors: A Tool for Software Engineering . . . . .	483
